

# Communication

Lieke Ypma

## **Situation:**

People or transport vehicles like to establish a communication while or before getting in traffic (person to person, person to vehicle or vehicle to vehicle is possible)

## **Target Group:**

People who like to communicate with others or with their vehicle in an easy manner while or before getting in traffic, disabled people (emergency signal)

## **Setting:**

Outside in some kind of traffic scenario, also e.g. indigent people on a sidewalk

## **Themes:**

- Chats
- Transfer of information
- Signals (e.g. control car, emergency signal)

# Communication

*It can commonly happen that somebody travels and is in need of communicating with others, but cannot because the control of his/her vehicle requires too much attention. Also there might be complicated steps to control a vehicle (while driving it) which are possible to be simplified with the use of sensors. Further it could be thought of detecting problems of disabled people and communicating these directly to a hospital or some other kind of "emergency station".*

Notes:
