Hermit

Description:

The hermit project is an interactive shell which provide people to have thier own private space or to take a nap.

The shell works as follows. When the user sits on the chair , overlaps his/her arms and bends over the table the shell will cover the user. Through the gloves or cuffs in the user's hands he/she can control whehter to open the shell or not. Also, a lighting led on both sides of the shell when the shell is closed it will be lighted red meaning telling outsiders not to disturb him/her. When they are lighted green meaning it is okay to interrupt (shell is opened).
